1745

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 March 2005 and 08 April 2005.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1 and 3-11 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 3-6, 8, 9 and 11 is/are rejected.
- 7) ☒ Claim(s) 7 and 10 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 July 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____

DETAILED ACTION

1. Claims 1, 3-11 are pending in this application after the amendment submitted 23 March 2005.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, 5, 8, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Hall et al. (EP 0 922 637 A2). Hall teaches a battery system in which a battery is connected to a radiator for discharging heat by a heat conduction artery. A thermal switch device with a controller thermally connects/disconnects the battery and the radiator and also physically contacts them. The thermal switch is opened (applicant's breaks off thermal connection) when the battery is near its minimum desired temperature so that the battery is not excessively cooled. The reference teaches two such devices. The exemplary thermal switch is a variable conduction heat pipe in which noncondensable gas in a reservoir is heated to open the switch (that is, restrict heat conductance from the battery). The device may also be a diode heat pipe, thermal joint such as a fusible alloy, or inflation of a helium bladder (applicant's heat controller that transforms shape). As shown in Figure 4, a heat pipe (60) connects a battery (38,44) and a heat source (63N56). (Col. 6, 11. 15 - Col. 7, 11. 50).

3. Claims 1, 3-6, 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Takabori et al. (JP 61-58173). Takabori et al. disclose a fuel cell with a temperature controller. The controller is formed of a bimetal, which changes shape at temperatures determined by the composition of the bimetal (applicant's predetermined temperature and is mounted to a liquid reservoir of the fuel cell. Highly heat conductive thin pieces are inserted into the fuel cell and radiation fins are exposed to the outside. The adjustment of cell temperature is provided by using the bimetal controller to contact the projection connecting the radiation fins which stand vertically or at an incline. (abstract, figure).

Response to Arguments

4. Applicant's arguments filed 26 March 2005 have been fully considered but they are not persuasive. Applicant argues that the switches of Hall do not transform shape by heat generated in one of the associated batteries; however, the transformation is a result of the heat generated in the batteries; the heat controller causes the switches to open in close based on the heat generated in the batteries. Applicant also argues that controlling a switch based on a minimum desired temperature would not suggest to one of ordinary skill in the art that the switch should be closed when the temperature reaches at least a first predetermined temperature. However, the minimum desired temperature is a "first predetermined temperature," and if one of ordinary skill in the art can open the switch at a given temperature, they can close the switch at a given temperature.

Allowable Subject Matter

5. Claims 7 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to teach or suggest a heat controller that establishes the thermal connection between the radiator and power source by expanding or a heat controller that moves the power source.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
